Integrated QHSE Policy

Sierra CP Engineering Limited

Sierra CP Engineering Limited is committed to delivering solutions, products and services that consistently meet or exceed customer expectations, while fulfilling all applicable legal, regulatory and other compliance obligations.

The Board provides active leadership, governance and accountability for an integrated Quality, Health, Safety and Environmental (QHSE) Management System, ensuring alignment with the organisation's strategic direction and long-term sustainability objectives.

We are committed to the protection of the environment, including the prevention of pollution, sustainable resource use, climate change mitigation and adaptation, and the protection of biodiversity and ecosystems, taking into account relevant environmental conditions and risks.

We apply a lifecycle perspective to our activities, products and services, considering environmental impacts across design, procurement, supply chain, delivery, use and end-of-life stages, and working collaboratively with partners to improve environmental performance.

We are committed to providing safe and healthy working conditions for the prevention of work-related injury and ill health. Hazards are identified, and risks are eliminated or reduced through effective controls, consultation and participation of employees and other stakeholders.

Environmental, safety and quality risks and opportunities — including those related to climate change and resource availability — are integrated into business planning, decision-making and change management processes to ensure resilience and sustained performance.

We establish measurable objectives and targets to drive continual improvement in environmental, safety and quality performance, and regularly monitor, review and report on outcomes to ensure effectiveness and transparency.

- This policy provides a framework for setting objectives and is communicated within the organisation and made available to relevant interested parties.
